PLOT PLAN REVIEW CHECKLIST

FOR EROSION AND SEDIMENT CONTROL PLOT PLANS

Temporary and permanent seed specifications? Lime and fertilizer? Mulching? Pavement/Stone? Has stabilization of soil stockpiles, borrow areas, and disposal areas been addressed in the narrative? Are sediment trapping measures provided? Has the establishment and maintenance of permanent vegetative stabilization been addressed? Has the establishment and maintenance of permanent vegetative stabilization been addressed? Does the Plan specifically state that sediment trapping facilities shall be constructed as a first step in land-disturbing activities? Does the Plan specifically state that stabilization of earthen structures is required immediately after installation? Are sediment traps and sediment basins specified where needed? MS-7 Have temporary and permanent stabilization of cut and fill slopes been adequately addressed? Are paved flumes, channels, or slope drains required on cut and fill slopes where necessary? Has water seeping from a slope face been addressed (e.g., Surface Roughening, subsurface drains)? MS-10 MS-10 Is adequate inlet protection required on all operational storm sewer inlets? MS-11 Are outlet protection and/or channel liming required on stormwater conveyance and receiving channels of MS-12 Are in-stream protection measures required so that channel impacts are minimized? MS-13 MS-14 MS-15 Has immediate restabilization of areas subject to in-stream construction been adequately addressed? MS-16 MS-17 Have stabilization of utility trenches and dewatering operations been addressed? Has the removal of temporary practices been addressed? Are properties and waterways downstream from development adequately protected from erosion and sediment deposition due to increases in peak stormwater runoff? MS-19 MS-19 Are properties and waterways downstream from development adequately protec
Lime and fertilizer? Mulching? Pavement/Stone? MS-2 Has stabilization of soil stockpiles, borrow areas, and disposal areas been addressed in the narrative? Are sediment trapping measures provided? MS-3 Has the establishment and maintenance of permanent vegetative stabilization been addressed? MS-4 Does the Plan specifically state that sediment trapping facilities shall be constructed as a first step in land-disturbing activities? MS-5 Does the Plan specifically state that stabilization of earthen structures is required immediately after installation? MS-6 Are sediment traps and sediment basins specified where needed? MS-7 Have temporary and permanent stabilization of cut and fill slopes been adequately addressed? MS-8 Have temporary and permanent stabilization of cut and fill slopes where necessary? MS-9 Has water seeping from a slope face been addressed (e.g., Surface Roughening, subsurface drains)? MS-9 Is adequate inlet protection required on all operational storm sewer inlets? MS-10 MS-11 Are outlet protection and/or channel lining required on stormwater conveyance and receiving channels MS-12 Are in-stream protection measures required so that channel impacts are minimized? MS-13 Are temporary stream crossings of non-erodible material required where applicable? MS-14 (NOTE: This regulation requires that all applicable federal, state and local regulations pertaining to working in or crossing live watercourses be followed.) MS-16 Have stabilization of utility trenches and dewatering operations been addressed? MS-17 Is the transport of soil and mud onto public roadways properly controlled? (i.e., Construction Entrances, wash racks, daily cleaning of roadways, transport of sediment to a trapping facility) Has the removal of accumulated sediment and the final stabilization of the resulting disturbed areas be addressed? MS-19 VICINITY MAP – A small map locating the site in relation to the surrounding area. Include any landmarks whimight assist i
Mulching? Pavement/Stone?
Pavement/Stone? Has stabilization of soil stockpiles, borrow areas, and disposal areas been addressed in the narrative? Are sediment trapping measures provided? Has the establishment and maintenance of permanent vegetative stabilization been addressed? Does the Plan specifically state that sediment trapping facilities shall be constructed as a first step in land-disturbing activities? MS-4 Does the Plan specifically state that stabilization of earthen structures is required immediately after installation? MS-5 Does the Plan specifically state that stabilization of earthen structures is required immediately after installation? MS-6 Are sediment traps and sediment basins specified where needed? Have temporary and permanent stabilization of cut and fill slopes where necessary? Has water seeping from a slope face been addressed (e.g., Surface Roughening, subsurface drains)? MS-10 Is adequate inlet protection required on all operational storm sewer inlets? MS-11 Are outlet protection and/or channel lining required on stormwater conveyance and receiving channels of MS-11 Are outlet protection and/or channel lining required on stormwater conveyance and receiving channels of MS-12 Are in-stream protection measures required so that channel impacts are minimized? MS-13 Are temporary stream crossings of non-erodible material required where applicable? MS-14 (NOTE: This regulation requires that all applicable federal, state and local regulations pertaining to working in or crossing live watercourses be followed.) MS-15 Has immediate restabilization of areas subject to in-stream construction been adequately addressed? MS-16 Have stabilization of utility trenches and dewatering operations been addressed? Has the removal of temporary practices been addressed? Has the removal of temporary practices been addressed? Are properties and waterways downstream from development adequately protected from erosion and sediment deposition due to increases in peak stormwater runoff? WICINITY MAP – A small map locating the
MS-2
Are sediment trapping measures provided?
MS-3 Has the establishment and maintenance of permanent vegetative stabilization been addressed? Does the Plan specifically state that sediment trapping facilities shall be constructed as a first step in land-disturbing activities? Does the Plan specifically state that stabilization of earthen structures is required immediately after installation? MS-5 Does the Plan specifically state that stabilization of earthen structures is required immediately after installation? MS-6 Are sediment traps and sediment basins specified where needed? Have temporary and permanent stabilization of cut and fill slopes been adequately addressed? Have temporary and permanent stabilization of cut and fill slopes where necessary? Has water seeping from a slope face been addressed (e.g., Surface Roughening, subsurface drains)? MS-10 Is adequate inlet protection required on all operational storm sewer inlets? Are outlet protection and/or channel lining required on stormwater conveyance and receiving channels MS-11 Are outlet protection measures required so that channel impacts are minimized? Are temporary stream crossings of non-erodible material required where applicable? MS-14 Are temporary stream crossings of non-erodible material required where applicable? MS-15 Has immediate restabilization of areas subject to in-stream construction been adequately addressed? Has immediate restabilization of areas subject to in-stream construction been addressed? Has the removal of temporary practices been addressed? Are properties and waterways downstream from development adequately protected from eros

sediment deposition due to increases in peak stormwater runoff? [] [] VICINITY MAP – A small map locating the site in relation to the surrounding area. Include any landmarks whi might assist in locating the site.
[] [] <u>VICINITY MAP</u> – A small map locating the site in relation to the surrounding area. Include any landmarks whi might assist in locating the site.
might assist in locating the site.
[] [] LIMITS OF CLEARING AND GRADING – Areas which are to be cleared and graded including listing the size
disturbed area.
[] [] <u>EXISTING CONTOURS</u> – The existing contours of the site.
[] [] <u>FINAL CONTOURS</u> – Changes to the existing contours, including final drainage patterns.
[] [] <u>EXISTING VEGETATION</u> – The existing tree lines, grassed areas, or unique vegetation.
[] [] <u>SOILS</u> – The boundaries of different soil types.
[] [] EXISTING DRAINAGE PATTERNS – The dividing lines and the direction of flow for the different drainage
areas. Include the size (acreage) for each drainage area.
[] [] <u>CRITICAL EROSION AREAS</u> – Areas with potentially serious erosion problems. (See the Virginia Erosion and
Sediment Control handbook, Chapter 6 for criteria.) [] [] <u>SITE DEVELOPMENT</u> – Show all improvements such as buildings, parking lots, driveways, access roads, etc.
[] [] LOCATION OF PRACTICES – The locations of erosion and sediment control and stormwater management
[] [] LOCATION OF PRACTICES – The locations of erosion and sediment control and stormwater management practices used on site. Use the standard symbols and abbreviations in Chapter 3 of the Virginia Erosic
[] [] LOCATION OF PRACTICES – The locations of erosion and sediment control and stormwater management practices used on site. Use the standard symbols and abbreviations in Chapter 3 of the Virginia Erosic and Sediment Control handbook.
[] [] LOCATION OF PRACTICES – The locations of erosion and sediment control and stormwater management practices used on site. Use the standard symbols and abbreviations in Chapter 3 of the Virginia Erosic

Version: May 3, 2005

Yes	No	N/A
[]	[]	[] <u>DETAIL DRAWINGS</u> – Any structural practices used that are not referenced to the E&S handbook or local
		handbook should be explained and illustrated with detail drawings.
[]	П	MAINTENANCE – A schedule of regular inspections and repair of erosion and sediment control structures should
		be set forth.
[]	[]	[] Owner's name.
[]		[] Name, address, occupation and signature of person preparing the plan if other than a registered design
		professional.
[]	[]	[] Property address and County Tax Map identification number.
[]	[]	[] The scale of the plan.
[]		[] Property lines and dimensions drawn in accordance with an accurate boundary line survey.
[]		[] Existing structures (walls, fences, accessory buildings, etc.)
[]	[]	[] Distances from all structures to adjoining property lines.
[]		[] Identification of potential expansive soil types per the Roanoke County Expansive Soil Policy.
[]		[] Location of floodplain, floodway, and floodway fringe from FEMA Flood Hazard Boundary maps and finished
		floor elevation or 100 acre water shed per Roanoke County Drainage Standards.
[]		[] Location, dimensions, and type of all easements.
[]	[]	[] Proposed or existing location of septic tank, drain field and repair area if applicable; or location of sanitary sewer
		lines.
[]		[] Proposed or existing well location if applicable; or location of water service line.
[]		[] Plan to indicate final disposition of all storm water to an approved discharge point.
